

ABSTRACT

A method for prevention of capsular opacification is provided. The method comprises:

- 5 a) creating an opening in a lens capsule of an eye;
- b) removing the natural lens from the lens capsule;
- c) inserting a capsule filling implant into the lens capsule; and
- d) injecting a composition into the space between
- 10 the inserted implant and the lens capsule.

In the method, the composition injected in step d) comprises at least one agent capable of inhibiting at least one of the following:

- proliferation of lens epithelial cells;
- 15 - migration of lens epithelial cells; and
- production of extra-cellular matrix by lens epithelial cells.
